## Where technology and ecology coexist

### Nodor is exclusive

Our products exude elegance and trendiness. Celebrating our fiftieth anniversary, we continue to be a leading brand in the world of Mediterranean kitchens.

Founded in 1968 as the pioneer manufacturer of extractor hoods in Spain, **NODOR**, derived from the contraction of the Latin name Non-odor, successfully established itself in the extraction market, and has held a position of leadership for extended periods.

**NODOR** is a brand historically closely linked to Mediterranean cuisine and kitchen furniture. The brand aligns with the understated and minimalist profile of our products. Our extensive range of cooking appliances and white goods positions us as a clear benchmark in the industry.

**NODOR**'s new products cater to today's individuals, with innovative models that combine ease of use, excellent performance and an elegant aesthetic to make the kitchen an ideal family gathering place.

At **NODOR**, we invest heavily in having the latest technology. Our product range harnesses all its benefits while remembering that the key is to make the complex easy in order to simplify our lives.

Our recent expansion into foreign markets is a crucial part of our business outlook. That's because at **NODOR** we work day after day to open new markets, expanding our horizons, so that – wherever you are – your kitchen is also **NODOR**.

## EXCELLENCE AND INNOVATION

### — Efficient innovation —

More than 50 years innovating to make for a better kitchen.

Our company continues to invest in R&D to create and develop technologically perfect products.

### — The highest quality standards —

Our proven experience in creation, development and manufacturing is one of the pillars supporting our products' high efficiency, quality and reliability.

### — Products designed and made in Spain —

We're proud to be the leading Spanish manufacturer of extractor hoods and all our products offer high levels of quality and guarantees.

We're one of the largest industrial groups in the industry with a global presence.

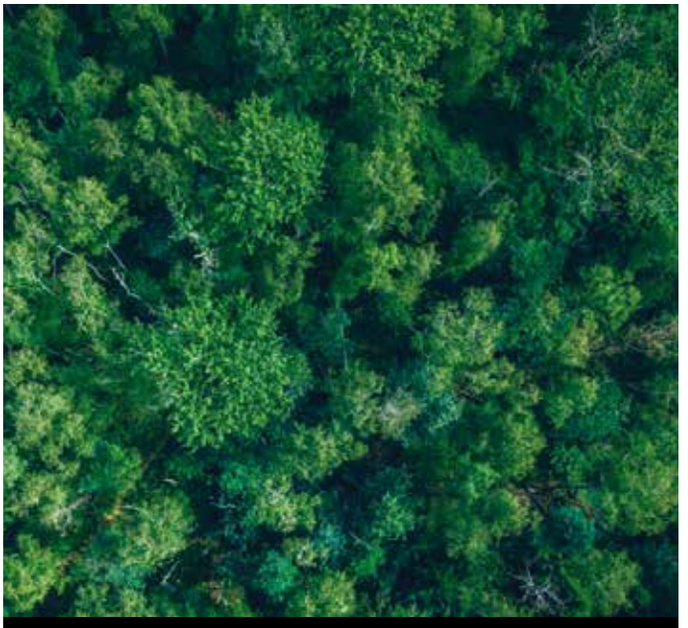

We're constantly expanding internationally via the creation of subsidiaries and branches. We currently operate in more than 100 countries.

## TECHNOLOGY AND DESIGN

Maximum functionality and ease of use are criteria for all our products.

Nodor's commitment is to offer the latest technology and design, combined with high performance, functionality and efficiency.

## CARING FOR THE ENVIRONMENT

We develop products and manufacturing processes that optimise energy consumption and minimise our environmental impact, by using sustainable materials.

## AS EASY AS PRESSING A BUTTON

The chance to harness scientific knowledge is at your fingertips every time you press a simple button on your microwave, oven or induction hob. You don't need to know the laws of physics or be an engineering expert. Cooking can be as simple as pressing the right device and waiting for the process to finish. That's NODOR technology. Because enjoying the pleasure of cooking is not incompatible with the advances that technology offers.

Designer settings are constantly being revamped. In order to respond to this on-going evolution, we've devised our exclusive ranges: Nodor Matte Black, Nodor Snow-White and Nodor Dark Black. Of course, you'll also have the range available in stainless steel if you want to give your kitchen a more classic touch.

**Timeless designs.** With our new matte black finishes, your kitchen will achieve a high level of elegance and restraint, creating a welcoming yet sophisticated space.

**Black is back.** Its minimalist, stylish design combines with every setting, granting each kitchen a sophisticated touch with its chrome details and pure black glass finishes.

**Black or white.** Nodor's new electrical appliances feature an enchanting aesthetic that never neglects our commitment to respecting the environment, which begins during the production process and translates to low-consumption energy ratings. It comes with the added advantage of a choice between pure white glass or pure black glass.

**Nodor electrical appliances** are different. We love the small details and we appreciate design and technology because it's in our DNA. The result is our Copper range with unique electrical appliances designed to satisfy even the most demanding chefs thanks to their technology and ease of use. Cooking has never been so easy with Nodor's new Copper range.

**Beauty and resistance.** If you're looking for a kitchen with a classic, stylish appearance and don't want to worry about combining colours and styles, the new stainless steel range will definitely be your best choice.

# OVENS & MICROWAVES
# PLATE WARMERS / VACUUM SEALER

## OVENS AND MICROWAVES, PLATE WARMERS AND VACUUM SEALER

**Nodor's new ovens and compact appliances** are a clear example of balance between design and usability. Minimalism is never at odds with functionality thanks to completely smooth handle fronts with no decorative elements to facilitate cleaning, and a 3.9-inch graphic text display to aid their use via simple touch controls.

One particular component that gives Nodor's new ovens and compact appliances notable character is their handle, not just for its chrome or copper finish, but also for its ergonomic, robust nature that enhances each electrical appliance's design.

Since great performance can be yielded from a small space, Nodor is launching its compact range, which includes ovens with Nsoft technology, steam ovens and microwaves.

They feature various kinds of trays to be used for different cooking methods.

**Is a microwave only for heating food?**

With Nodor's new microwaves, you can do a range of things, from making quick sponges to cooking fish, pasta, vegetables and even roast potatoes.

To ensure your packed daily diary doesn't stop you from enjoying a healthy, balanced diet, **Nodor's new microwaves** (with capacities of up to 40 litres) will help you to cook 85% faster, leading to 70% energy savings compared with a conventional oven.

**Nodor's new plate warmers** are really versatile. They're the perfect complement to your kitchen, not only for their

ability to heat plates, trays and mugs, which will stop cold kitchenware from altering the qualities of the dishes you make, but also by helping to keep food warm without affecting its texture or flavour, gently defrosting food without cooking it, fermenting dough, cooking meat and fish at a low temperature, preparing yoghurt, and also acting as an extra space for storing kitchen items. Of course, they come with Nodor Ncomfort technology, which will facilitate easy access to your plate warmer.

You'll also find a practical storage drawer, which combines with your compact electrical appliance.

**Vacuum sealers** are a useful tool for keeping food fresh for longer, reducing the space food items occupy, preventing odours from mixing, and stopping frozen food from dehydrating.

## OVENS

### Npyroclean

Pyrolytic cleaning is a system that enables an oven to be cleaned automatically with no need for chemical products. It involves raising the oven's temperature to around 500ºC, which causes dirt to decompose and turns it to ash that can be easily removed using a damp cloth. This is an extremely convenient, effective and hygienic method, since it eliminates the bacteria and other microorganisms that can be found inside an oven. With a variable cleaning time programme that ranges from 1 hour to a maximum of 3 hours, no dirt will be able to resist this programme, which costs just €0.37.

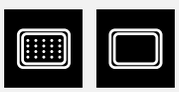

### Nsabbath

This function allows an oven to be programmed to remain switched on at a constant temperature without switching off when the door is opened or a button is pressed. It also emits sound signals or shows messages on-screen. The Sabbath function can only be used to bake or roast, not for self-cleaning or programmed start.

### Nclean

With Nodor's new easy-clean Nclean enamel and thanks to its reduced porosity, cleaning both the oven and its trays is a simple task. This enamel, with Ndamantium technology, stands out thanks to its excellent durability and resistance to blows and scratches. Your oven will look as good as it did on day one. Cooking for all the family in its large cavity.

### Nsteelclean

Stainless steel cavities with a smooth finish and soft edges to facilitate cleaning.

### Multifunction Nsoft

Ovens and microwaves with Nsoft technology guarantee excellent results thanks to surround cooking of food during roasting.

### Nhome-baked

With Nodor's new Nhome-baked function, the traditional flavour of food cooked in a wood oven will finally be achievable by less experienced cooks.

### Nsteam

Cook healthily with the new Nsteam function on Nodor's steam oven. The Nsteam function maintains all the nutrients, vitamins and minerals found in food, achieving wonderful flavours, intense aromas and preserving their texture and original colour. Not only is steaming a healthy cooking method, it also leads to savings because food requires less time to cook, using 23% less energy than traditional cooking.

### Ncomfort

Easy cooking access to prevent burns when handling food thanks to Nodor's new Ncomfort easy-extraction guides.

### Nchild

We care about safety in your home, which is why the Nchild function will prevent accidental activations of the controls on your electrical appliances.

## MICROWAVES

### Nmenu

The eight automatic programmes help to quickly cook food without affecting flavour in the slightest.

### Nquick

The microwave starts quickly at maximum power to ensure you never waste a second when heating food. Not only does the new Nquick function help to heat food, but it can also prepare aromatic oils, help stop the tears caused when cutting onions, peel garlic, peel tomatoes, extract more juice from citrus fruits, dry out herbs...

### Ncrisp

To achieve more appealing, flavoursome finishes, Nodor microwaves include the Ncrisp function that you can use to caramelise the surface of foods or achieve a crispy finish, as desired.

### NWcrisp

If you want your dishes to cook and brown at the same time, with Nodor's new NWcrisp combi function you can adjust the cooking power depending on whether you're cooking vegetables, meat or fish.

### Nfrost

With an option to defrost by weight or time, you'll maintain food's real flavour while preventing it from cooking during the defrosting process.

# EXTRACTOR HOODS

## EXTRACTOR HOODS

Quiet! We're cooking. Silence and efficiency don't come into conflict. Their excellent extraction power together with a low noise level (barely a murmur at 42 dB) make Nodor extractor hoods the perfect complement for your home.

Nodor's new extractor hoods are easy to clean thanks to smooth surfaces and integrated touch controls, thereby preventing grease from building up.

Grease filters made entirely from steel give the product a typical industrial hood appearance. Thanks to the labyrinth of steel layers, this filter has an improved grease capture capacity.

Its first layer is made of steel while it has a microperforated rear layer, which is easily washed and is better at retaining the fat produced while cooking.

Another of their key aspects is lighting. All Nodor extractor hoods feature highly efficient lighting: LED strips that fully illuminate the work area or create the ambience required for a romantic dinner.

Nodor's new extractor hoods stand out due to their quick and simple installation, whatever the kind of hood selected.

## EXTRACTOR HOODS

### NBOOT

Nodor's extractor hoods offer unprecedented integration in your kitchen. Their filters are fully hidden when the hood is not in use. When switched on, the panels open automatically to aid smoke and steam extraction.

### NCONNECT2 NCONNECT

With manual or automatic regulation of the extraction of fumes and steam depending on what is being cooked in the hob.

### NCHILL

By adjusting the intensity of the LED lighting, you can create the perfect atmosphere in your kitchen for cooking, or perhaps to give your guests a surprise.

NODOR

## FLOW-IN, INDUCTION AND GAS / KITCHENWARE

With **Nodor's new induction hobs** you'll learn to enjoy cooking again. You'll dare to tackle any recipe, however complicated it might seem, thanks to their intuitive use and their new functions that help you during the cooking process, guiding you with the options available, automatically recognising up to six pans, and activating the sliding control areas when you move a pan into place.

Their cooking surfaces adapt to your needs when you're making your favourite recipes. Use pans without worrying about their position, because now you can use the entire induction surface.

The size of your kitchen doesn't matter. With Nodor's new induction hobs there's always a hob that will fit in the space available, ranging from 30 cm to 95 cm.

**Induction with surface extraction** is an innovative technology that combines the benefits of an induction hob with an extraction system integrated in the cooking surface itself. The induction hob with surface suction offers a modern, stylish image with no components that interfere with your line of vision.

For fans of traditional cooking, everything is now much simpler and safer with **Nodor's new gas hobs**. Their powerful 3.5 kW triple crown burners guarantee efficient cooking thanks to their ability to adjust the flame and swift heat transmission to the pan given their high heating power. These new gas cookers are, above all, practical. Their extensive tempered glass surface simplifies the cleaning process and their cast iron grills facilitate the movement of pans across the entire surface without lifting them.

Unique flavours, intense aromas, surprising textures and new experiences are within reach with the new **Norcook Steamchef**. Healthy, nutritional cooking doesn't need to be boring: you set the limits, we'll provide the means. It has two internal trays for cooking directly with steam or in the food's own juices, a thermometer to cook at the exact temperature, steam outlet adjustment to cook things quicker or at a low temperature, and a tank to infuse aromatic herbs and give your recipe a personal touch.

Furthermore, it's perfect for use as a dish both in the oven and on any kind of hob, including induction hobs with flex areas, thanks to its rectangular base.

It offers full safety during the cooking process via ergonomic silicone handles that aid handling, and thanks to its glass safety lid that means you can see how things are going at all times.

## FLOW-IN / INDUCTION

### NSENSE

Automatic cookware detection, the slider controls for the cooking area are activated automatically when a pan is detected.

Nodor's new hobs are also convenient. When a pan is removed from the induction hob, its slider control will switch off automatically.

### NPRECISE

Nodor's new induction hobs are synonymous with precision. You can select up to 17 power levels to achieve the perfect temperature while cooking.

### NBOOST

With up to 2 extra power levels for when you need all of your Nodor induction hob's power in short spaces of cooking time.

### NFOLLOWME

The power level selected for the pan will be upheld while it's moved across the surface of the different induction cooking areas.

### NPROTECT

Protect your favourite pans from abrupt changes in temperature. Now Nodor's new induction hobs can detect if a pan is empty, preventing the deformations caused by excessive heating.

### NFASTUP

With Nodor's new induction hobs, once the fast heat process has been completed, they automatically reduce their power, ensuring your food doesn't burn.

### NLOCK

Locks the induction hob to prevent accidental activation while cooking.

### NCHILD

Locks the hob to prevent children from switching it on accidentally.

### NCONNECT2

With manual or automatic regulation of the extraction of fumes and steam depending on what is being cooked in the hob.

### NPAUSE

Clean the hob's surface area easily or leave your cooking to answer the phone or take care of a family member without worrying about what's happening in your kitchen.

### NMEMORY

Nodor's new induction hobs bring nothing but benefits: if you accidentally switch off your hob, the new Nmemory function will restore the power levels and cooking areas that were being used.

### NCHEF

Cook like a real chef. With the Nchef function you can divide the induction surface into three areas with a different power. On the left you can simmer vegetables or keep something hot, in the centre you can continue cooking, and on the right you can sear meat or boil large volumes of liquids.

### NBBQ

With the new grill function you can achieve the characteristic flavour of a barbecue without leaving home.

### NCOOK

With up to three cooking functions that allow you to easily keep food hot without cooking it, melt chocolate or butter, or boil something over a low heat.

### NTIME

Some recipes require precise control of the time, such as pastas, rice dishes, eggs... It's also useful for controlling the intermediate times in your recipes, or simply to remember when something has finished.

### NPASTA

Both pasta and rice will always be cooked to perfection thanks to the memorised cooking time.

### NMANAGEMENT

Option of limiting the hob's power based on the power you have contracted, without limiting efficiency and cooking speed with an induction hob.

## GAS

### NSELECT

Nselect technology ensures efficient cooking by precisely adjusting the flame and aiding a swift transmission of heat to the pan thanks to its excellent heating power.

### NFLAME

We've thought about you and your loved ones' safety. Nodor's new gas hobs feature Nflame technology, which switches off the gas supply if it detects the absence of a flame.

### NSPARK

We've taken convenience into account. With the Nspark system you can instantly switch on each burner quickly and safely.

# WHITE GOODS

# WHITE GOODS

## Refrigerators, Freezers, Dishwashers, Washing Machines and Tumble Dryers

The extensive range of **Nodor refrigerators** are designed to suit any type of setting, from the restraint of its models with a black or white glass finish, to more daring kitchens that opt for colour contrasts or more classic settings with the vintage range, which comes in stainless steel.

With Nodor's new built-in refrigerators we're choosing sensations. These are the perfect solution for achieving more visually sweeping spaces and astonishing designs, thanks to their full integration with the kitchen units.

We aim to guarantee the freshness and quality of the food stored inside Nodor refrigerators. Thanks to temperature and humidity control, food is kept fresher for longer.

We care about you, but we also care particularly about the environment. Nodor refrigerators and freezers are designed from their first sketch to the end of their useful life with environmental sustainability in mind. The use of recyclable materials, a reduced use of fluorinated gases, the efficient distribution and generation of cold, and a reduced energy consumption help to reduce our carbon footprint. Nodor's models with an energy class of C (A+++) entail a 30% saving compared with a G (A) model. The E (A++) models a 20%.. LED lighting inside both refrigerators and freezers helps you to view inside the appliance while also reducing energy consumption and maintenance.

To ensure a refrigerator operates correctly, when purchasing one make sure you take into account its climate class as an incorrect choice could result in poor food storage and greater consumption. Nodor refrigerators have been designed to operate in temperature ranges from 10°C to 43°C, meaning hot climates.

Because your peace of mind and leisure time matter to us, Nodor's new refrigerators are really silent, with a noise level of 40 dB, 12% below the wellness level advised by the World Health Organisation.

## Refrigerators / Freezers

### Nplasma

An innovative disinfection system via plasma that eliminates viruses and bacteria with 96.5% effectiveness. You no longer need to clean your purchases with alcohol or diluted bleach when you get home. Enjoy the food stored in your refrigerator with full peace of mind.

### Nfreshzone+

Their sensors' precision when it comes to adjusting the temperature is a crucial factor in terms of saving energy and ensuring food is stored correctly. With cold distribution in three independent areas, your food will last for longer and will remain fresher until it's time to use it, saving you time when shopping and saving you money.

Furthermore, since the cold is distributed across three different areas, you'll ensure smells don't mix inside the fridge. And if that's not enough, with Eplasma technology you'll eliminate all traces of bad smells thanks to its negative ions.

### Nfreshzone

Efficient, stable distribution of cold air enabling reduced consumption.

### Nfrost

All refrigerators in Nodor's new range featuring Norfrost technology prevent ice from forming on their walls, thereby facilitating maintenance and cleaning tasks while also ensuring improved food storage and a longer useful life for the appliance.

### Nlifebox

The temperature remains close to 0 degrees, but without freezing food: storing meat and fish while maintaining their proteins, vitamins, minerals and micronutrients to guarantee the health of you and your loved ones.

### Nchilly

Is your team about to kick off in the cup final and you've forgotten to fill the refrigerator with your favourite drink? With the Nchilly function you can quickly chill food and beverages to ensure they're ready before the match starts.

### Ndualzone

Independent temperature adjustment in the refrigerator and the freezer means you can generate two distinct atmospheres. Humid to keep food fresh in the refrigerator, and dry to ensure food in the freezer doesn't generate ice.

### Ngreenbox

Thanks to humidity and temperature control, you can store fruit and vegetables while maintaining their recently picked flavour and freshness.

### Nsubzero

This function enables a quick freeze of foods, preventing contamination by the microorganisms found in food as well as the formation of large ice crystals on the food, which would otherwise affect its flavour and texture. Nodor refrigerators have three freezer drawers that will facilitate foodstuffs storage and prevent cross-contamination between them.

**Nodor's new built-in dishwashers** allow for a variety of installation options, which means they can adapt to any type of kitchen, offering you extra convenience in your daily life.
Environmentally friendly, Nodor's new dishwashers consume 28% less energy than those categorised as E class while washing. Their washing efficiency is key to lower consumption, but their capacity also aids energy savings since they can wash more dishes in a single washing cycle. They also have a deferred programme option to aid electricity consumption savings with your night rate. Nodor's new dishwashers can accommodate 16 place settings.

Nodor's new dishwashers are incredibly practical. They have three racks where you can safely position your dishes in an orderly fashion. Thanks to their third sprinkler, cleaning is guaranteed to reach every corner of your dishwasher.

Since not every day is the same, fortunately, Nodor's dishwashers adapt to your rhythm of life by offering different programmes to tackle big family meals, gatherings with friends and romantic dinners with the dishes you keep for special occasions.

## Dishwashers

### Nslider

The little details make all the difference. The new Nslider dispenser means the number of dishwasher services can be increased thanks to its innovative opening system, while it also guarantees the correct distribution of detergent by ensuring it doesn't get stuck in the opening cover or dishes.

### N3protect

Your safety – as well as that of your home – is important. With Nodor's N3protect system water leaks are prevented when the dishwasher isn't in use. It protects your dishes and the dishwasher from overheating caused by excess temperature. In addition, it ensures no overflows during the washing process.

### Nwashing

Nodor's new dishwashers with the Nwashing function are so silent (at just 42 dB) that we've included an LED light that shines on the floor while they are operating to prevent you from accidentally opening them. This is an elegant and silent way of letting you know when your dishes are ready.

### Nstorm

Intensive programme for stubborn stains that would take a great deal of effort, time and energy to remove without the help of a dishwasher.

### Nsave

Eco programme. The most efficient programme in terms of energy consumption and water savings.

### Ncare

Glass programme. To care for the delicate dishes you love with improved drying that ensures no annoying droplets are left on your glasses.

### Nfresh

Special programme to soften dirt before washing or to remove bad smells inside the dishwasher when dishes are dirty.

### Npush

With the convenience of the Npush system, which allows you to adjust the heigh of the second tray depending on the type of dinnerware you want to wash. As a result, you can adapt the tray if you have to wash large pans, wine glasses or tall glasses. Of course, you always have the flexibility offered by their third modular tray, which has been specially designed for washing cutlery.

### Nmove

The dishwasher's door, with Nmove, guarantees full integration since it can be installed to leave a gap of 3 mm to the floor or drawer. Thanks to its innovative hinges, you won't need to cut the skirting, allowing for better integration of the dishwasher with your kitchen units. Now your installation options have increased: you can install Nodor dishwashers traditionally (under the worktop) or more ergonomically (in column format to aid dish loading and unloading).

### Ndaily

Daily programme. Specially for dishes that aren't particularly dirty.

### Nquick+

Fast programme. For when you don't have time, in 30 minutes your dishes will be ready.

### Nquick

Express programme. High-temperature cleaning in just 90 minutes.

### Nby2

When the dishwasher isn't full you can wash a half-load without having to position the dishes in any particular way. This leads to reduced energy and water consumption, and less time is required as the wash duration is reduced by 10 minutes.

**Nodor's new built-in washing machines** are the perfect ally for your kitchen. You'll forget you have a washing machine, not just because of its integration with your kitchen units, but also due to its washing efficiency, consumption efficiency and, above all, for its silence.

The door's large diameter and opening angle will facilitate the loading and unloading of clothes. Together with its high load volume (capacity of up to 9 kg), you can wash an entire load in 60 minutes, or in just 15 minutes if you opt for the Nquick+ fast wash.

We also have washing-dryer machines that will leave your clothes dry, ready for ironing, after washing them.

Nodor's new dishwashers with energy class A consume 42% less than class F machines.

## Washing Machines / Tumble Dryers

### Nquick+

The little details make all the difference. The new Nslider dispenser means the number of dishwasher services can be increased thanks to its innovative opening system, while it also guarantees the correct distribution of detergent by ensuring it doesn't get stuck in the opening cover or dishes.

### Nsensor

Your safety – as well as that of your home – is important. With Nodor's N3protect system water leaks are prevented when the dishwasher isn't in use. It protects your dishes and the dishwasher from overheating caused by excess temperature. In addition, it ensures no overflows during the washing process.

### Nchild

Nodor's new dishwashers with the Nwashing function are so silent (at just 42 dB) that we've included an LED light that shines on the floor while they are operating to prevent you from accidentally opening them. This is an elegant and silent way of letting you know when your dishes are ready.

### Nspecial

Intensive programme for stubborn stains that would take a great deal of effort, time and energy to remove without the help of a dishwasher.

# WINE COOLERS

## WINE COOLERS

**Nodor's wine coolers** will fit in perfectly with your kitchen thanks to their stylish design with a stainless steel external finish and a wooden interior. You'll forget you have a wine cooler, so perfectly do they integrate and thanks to their low noise level of up to 39 dB. A wine cooler is the perfect way to store wine and prevent vibrations.

Nodor's new wine coolers are practical thanks to their reversible doors, meaning you can install them in any position. Access to your wine is simple and convenient via sliding racks.

The wine cooler range offers an extensive variety of options that can be installed in kitchen units. They range from compact options of 45 cm to those for column installation in sizes of 45 cm or 60 cm.

Their interior LED lighting (installed in all models) offers this appliance a touch of elegance). It will also protect your wine, as this form of light doesn't emit infrared or ultraviolet rays, thus preventing the appearance of light-struck taste in wine.

## Wine Coolers

### Norfrost

All wine coolers in Nodor's new range featuring Norfrost technology prevent ice from forming on their walls, thereby facilitating maintenance and cleaning tasks while also ensuring improved wine storage and a longer useful life for the appliance.

### Nortemp

The temperature control system (in any of the different spaces) allows you to have precise, constant control over the temperature inside the entire wine cooler. According to your tastes and needs you'll be able to simply control the temperature. With up to two different layered temperature areas for improved wine storage. 11-13ºC white wine, 5-11ºC champagne, 14-22ºC red wine.

### Nsavor

Nodor's wine coolers have an electronic touch control that enables you to select the temperature easily and conveniently to achieve the perfect temperature for serving your favourite wine.

### Nprotect

Since an investment in a good wine means you can't store it just any old way, Nodor's wine coolers offer unbeatable storage conditions that combat wine's old enemies, including vibrations and ultraviolet rays.

### Npureair

Thanks to their air purification system via their carbon filter, you'll prevent bad ambient odours, intense aromas and the bacteria that contaminate the flavour and scent of your wines, or destroy their corks.

# TAPS&SINKS

## TAPS AND SINKS

In addition to offering different models, sizes and aesthetics, **Nodor** has designed a **full range of taps** where you will find the right solution for your kitchen that best suits your aesthetic and functional requirements.

All Nodor taps (as is the case with all other ranges the brand markets) are subject to strict quality testing and follow the highest standards, which set Nodor apart in the market in terms of reliability and maximum durability. Nodor only uses top-quality materials and finishes, while never neglecting design.

This extensive range offers stainless steel models with low and high spouts, with lever customisation options to suit different kitchen settings.

In its catalogue Nodor features taps in a new stainless steel series with premium quality finishes, while you will also find taps with removable spouts, offering the versatility and functionality that best adapts to your needs.

The result of advanced engineering with a notable focus on design is a **range of sinks worthy of even the most ambitious of kitchens**.

Using innovative technology together with high-quality raw materials, Nodor presents NorGranite, a collection of sinks destined to be the star of the show.

The basis of our sinks is quartz, the hardest part of granite. We mould our quartz with high-quality acrylic resin via a special smelting process controlled by computer. The result is a hardened composite material that is resistant to scratches, dents, stains, heat and cracks.

Thanks to this characteristic, our quartz composite sinks last almost a lifetime.

They are available with or without a drainboard, with one or two basins, or with an auxiliary basin. They come in a wide variety of colours, design shapes and sizes.

Different installation options are available (undermount or top-mount), which are very simple to do, with the sink left perfectly fixed thanks to its attachment clips.

Some of our models are design to personalise tap placement with a lip at the rear that makes it simple to create the hole for the tap, without noticing this on the sink's visible parts.

The details make all the difference. Smooth finishes, profiles precisely rounded to the millimetre, perfect edges, personalised overflows, practical drains and an endless number of unique features make a huge difference on the naked eye.

We're fully committed to caring for our planet. We believe in responsible, sustainable development while complying with all management system standards and international certifications.

This commitment entails pinpointing more sustainable production methods and investing in resource-saving technology to promote manufacturing.

Their practical design, overflow integration, broad range of installation options, marked angles between surfaces and 10 mm edges that facilitate cleaning make the new NorAce sinks in stainless steel the perfect tool for integrating a sink in a kitchen.

Their three installation types offer your kitchen a wide selection of possibilities. Practical undermount installation will facilitate cleaning since there will be no obstacles between your sink and the worktop surface. Elegant flush-mount installation will create a contrast between the worktop and the sink's stainless steel trim, which is also easy to clean. Lastly, the most widely used installation type is top-mount, which will allow you to enhance your sink's visual impact.

Sinks in stainless steel AISI 304 maintain their unaltered appearance thanks to their resistance to oxidation, practically guaranteeing they will last for life. Their 1 mm thickness and satin finish make them resistant to accidental blows and scratches during daily use.

Their attractive hidden valve increases their beauty by remaining perfectly integrated with the drain's surface. Furthermore, you can customise the hidden valve with the same colour as your Nodor tap.

## Taps and Sinks

Heat resistant up to 280°C.

Resistant to stains, scratches, dents and cracks.

Sharp, lasting colours.

Easy to clean.

Resistant to abrasive products.

100% non-porous, hygienic and bacteria-resistant.

Safe in contact with food.

All necessary accessories included. Drain with independent basket, customised overflow and attachment clips (undermount and top-mount).

(1) Classes range from A (most efficient) to G (least efficient).
(2) This programme is suitable for washing dishes with a normal level of dirtiness and is the most efficient in terms of energy and water consumption combined.
